

Gunnersbury Catholic School

A-level Physics

Exams

Revision for Exams

Telescopes

Classification of stars

A01 - Astrophysics

Fission and fusion

Energy and mass

26 - Radioactivity

Cosmology

Binding energy

Thermal nuclear reactor

Radioactive decay

Alpha, beta and gamma

26 - Radioactivity

Ideal gas law

20 - Gases

Specific heat capacity

Internal energy and temperature

Transformers

AC and power

The AC generator

Generating electricity

25 - Electromagnetic induction

Charged particles in circular orbits

Moving charges in a magnetic field

24 - Magnetic fields

Charging and discharging

Energy stored in a charged capacitor

23 - Capacitors

Dielectrics

Capacitance

Comparing electric fields

Coulombs law

Electric field strength

22 - Electric fields

Satellite motion

Planetary fields

Newton's law of gravitation

Gravitational potential

Gravitational field strength

21 - Gravitational fields

Resonance

Energy and SHM

Centripetal acceleration

17 - Motion in a circle

Applications of SHM

Sine waves

Principles of SHM

Oscillations

18 - Simple Harmonic Motion

Uniform circular motion

YEAR 13

Kinetic and potential energy

Power

Efficiency

Density

Deformation

10 - Work, energy and power

Wave-particle duality

Electron collisions

The photoelectric effect

Work and energy

11 - Materials

Springs

Stress and Strain

3 - Quantum phenomena

Elastic and inelastic collisions

Explosions

Conservation of momentum

Impact forces

Momentum and impulse

Vehicle safety

$F = ma$

Conservation rules

Leptons

2 - Quarks and leptons

Motion graphs

Free fall

Motion along a straight line

Acceleration

7 - On the move

Speed and velocity

Equilibrium rules

Stability

Moments

Balanced forces

13 - DC Circuitis

Diffraction

Total internal reflection

5 - Optics

Components and their characteristics

Resistance

12 - Electric current

Using oscilloscopes

Wave properties

Waves and vibrations

YEAR 12

welcome

Circuit rules

Electromotive force and internal resistance

The potential divider

Inside the atom

Photons

Particle interactions

Vectors and scalars

Moments

Interference

Refraction of light

Potential difference and power

Current and charge

Stationary and progressive waves

Measuring waves

4 - Waves

More about resistance

Circuit calculations

1 - Matter and radiation

Stable and unstable nuclei

Particles and antiparticles

6 - Forces in equilibrium

Components and their characteristics

Resistance

12 - Electric current

Using oscilloscopes

Wave properties

Waves and vibrations

YEAR 12

welcome
