Stay curious!! Spend some time learning about new topics. Broadening your horizon

Find some time each day to use mindfulness techniques, yoga or meditation to relax, reflect and remain calm

Explore a museum or art gallery using a virtual tour

Challenge yourself to learn more about Science and Maths

Dear Year 11 student,

This document has been created to assist you in your continued development and learning, outside of our curriculum.

Each icon is hyperlinked to guide you to appropriate activities or opportunities. In fact, anything underlined in the document is a hyperlink.

It aims to provide you with opportunities to explore avenues that will help you to grow as an individual. On top of that, you can access the transition work for any A-Level's you may wish to take next year!

The opportunities highlighted are merely stepping stones to help you progress and to build character as you continue to develop yourself and 'aim for the highest'.

However, what you may notice is that not all these links are academic; as you know it is essential to develop all parts of your character and add as many strings to your bow as possible. Through this document you can begin to explore further maths and science, mindfulness, films, books, podcasts and much more.

For those of you wishing to challenge yourselves further (in the spirit of our motto), you may wish to check out some of the free online courses offered by The Open University, Future Learn, and Yale University.

During these challenging times why not challenge yourself to grow a little everyday?

Best wishes,

Mr Stringer
Head of Year 11
